CLAIMS:

We claim:

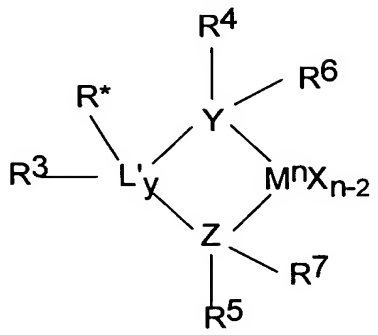
1. A neat polymer comprising a unprocessed, untreated granular bimodal polyolefin comprising ethylene derived units and C_4 to C_{12} α-olefin derived units; wherein sieved neat polymer fractions obtained from 35, 60 and 120 mesh sieve sizes have I_2 values that are within 40% of one another.

2. The neat polymer of Claim 1, wherein the I_2 values of the polymer fractions are within 30% of one another.

3. The neat polymer of Claim 1, wherein the I_2 values of the polymer fractions are within 10% of one another.

4. The neat polymer of Claim 1, wherein the I_2 values of the polymer fractions are within 6% of one another.

5. The neat polymer of Claim 1, wherein the I_2 values of the polymer fractions are within 4% of one another.



6. The neat polymer of Claim 1, wherein sieved neat polymer fractions obtained from 18, 35, 60 and 120 mesh sieve sizes comprise greater than 90 % of the total weight of the neat polymer.

7. The neat polymer of Claim 1, further possessing an Mw/Mn value of from 1.5 to 70.

8. The neat polymer of Claim 1, wherein the Mw/Mn values of sieved neat polymer fractions obtained from 18, 35, 60 and 120 mesh sieve sizes do not vary by more than 20 % relative to one another.

9. The neat polymer of Claim 1, wherein the Mw/Mn values of sieved neat polymer fractions obtained from 18, 35, 60 and 120 mesh sieve sizes do not vary by more than 10 % relative to one another.

10. The neat polymer of Claim 1, wherein the unprocessed, untreated granular bimodal polyolefin possesses a density of from 0.930 to 0.965 g/cc.

11. The neat polymer of Claim 1, wherein the unprocessed, untreated granular bimodal polyolefin possesses a density of from 0.910 to 0.940 g/cc.

12. The neat polymer of Claim 10, wherein the unprocessed, untreated granular bimodal polyolefin further possesses a I_{21} value of from 4 to 12 g/10 min.

13. The neat polymer of Claim 10, wherein the unprocessed, untreated granular bimodal polyolefin further can be extruded at a rate of from greater than 17 lbs/hour/inch of die circumference.

14. The neat polymer of Claim 1, wherein the neat polymer is produced in a single gas phase reactor.

15. The neat polymer of Claim 14 formed by the process of combining a catalyst component slurry is continuously combined with a catalyst component solution, followed by contacting with ethylene and α-olefins in a gas phase fluidized bed reactor; the slurry comprising an activator supported on a support material.
